Process Definition Document (PDD)

Daily FX Reference Rate Update

Document ID	PDD-FIN-TRE-007
Version	1.0
Status	Approved
Date	25.09.2026
Business unit	Finance – Treasury
Prepared by	Tobias Graf (Business Analyst, RPA CoE)
Classification	Internal – Confidential

STATUS: APPROVED

1. Document Control

1.1 Version History

Version	Date	Author	Change summary
0.1	10.09.2026	Tobias Graf	Initial draft
0.5	19.09.2026	Tobias Graf	Review comments from Treasury incorporated
1.0	25.09.2026	Tobias Graf	Approved version

1.2 Approval and Sign-off

Role	Name	Decision	Date	Signature
Process Owner	Claudia Steiner (Head of Treasury)	Approved	25.09.2026	C. Steiner (e-signed)
Business Analyst	Tobias Graf	Approved	25.09.2026	T. Graf (e-signed)
RPA Solution Architect	Marco Rossi	Approved	24.09.2026	M. Rossi (e-signed)
IT Security	Daniel Frei	Approved	24.09.2026	D. Frei (e-signed)

2. Introduction

2.1 Purpose

Every business day Treasury publishes the official reference exchange rates used for intercompany invoicing and month-end revaluation. Today a treasury assistant copies the rates manually from the central bank website. This document describes the automation of that task.

2.2 Objectives

- Rates available in the FX master workbook and the treasury system by 09:30 every business day.
- No manual typing errors in published rates.

2.3 Key Contacts

Role	Name	Contact
Process Owner	Claudia Steiner	claudia.steiner@nordhorn.example
Subject Matter Expert	Lea Zimmermann (Treasury Assistant)	lea.zimmermann@nordhorn.example

3. As-Is Process

3.1 Process Overview

At around 09:00 the treasury assistant opens the central bank's daily reference rate page, copies the rates for the agreed currencies into the FX master workbook, runs the workbook macro that refreshes the pivot tables, enters the same rates in the treasury system and sends a confirmation email to the Treasury distribution list.

3.2 Process Statistics

Frequency	Once per business day
Volume	1 run per day, 5 currencies
Average handling time	20 minutes

Current effort	approx. 0.1 FTE

3.3 Applications Used

Application	Type	Version / Access	Used for
Central bank reference rate page	Web (public)	Public website, any browser	Source of daily reference rates
FX master workbook FX_Rates_Master.xlsm	Excel (macro-enabled)	\\fs01\finance\Treasury\FX_Rates_Master.xlsm	Rate history; macro RefreshPivots updates reports
Treasury system	Web	TBD	Entry of the daily rates
Outlook	Email	Microsoft 365	Confirmation email

4. To-Be Process

4.1 Overview

One unattended run per business day processes all currencies in a single pass. There are no queue items; the run either completes or fails as a whole. Per IT infrastructure guidelines, the process shall run on the **Linux serverless robot pool** in UiPath Automation Cloud.

4.2 Process Steps Summary

Step ID	Application	Action	Rules / Exceptions
S01	Browser	Open the central bank reference rate page	SE-01
S02	Browser	Read the rates for EUR, USD, GBP, JPY (per 100) and CNY for today's date	BR-01, BE-01
S03	–	Validate rates against the previous business day	BR-02
S04	Excel	Append today's rates to FX_Rates_Master.xlsm and run macro RefreshPivots	BR-03
S05	Treasury system	Enter the rates in the system	–
S06	Outlook	Send confirmation email to Treasury	–

4.3 Detailed Steps

S01 – Open reference rate page

Open the central bank's daily reference rate page in the browser. URL: to be provided by Treasury.

S02 – Read rates

1. Locate the table with the daily reference rates.
2. Verify that the publication date shown on the page equals today's date (BE-01 if not).
3. Read the rate for each currency in Appendix A.

S03 – Validate rates

Compare each rate with the previous business day's rate in the FX master workbook. If a rate deviates by more than 5%, Treasury must be informed (BR-02). Handling of the run in that case: to be clarified.

S04 – Update FX master workbook

1. Open \\fs01\finance\Treasury\FX_Rates_Master.xlsm, sheet **Rates**.
2. Append one row: Date, EUR, USD, GBP, JPY100, CNY, Source = 'Robot'.
3. Run the VBA macro **RefreshPivots**.
4. Save and close the workbook.

S05 – Enter rates in treasury system

Log in to the treasury system and enter the daily rates on the rates maintenance screen. Screen details will be added after a walkthrough with the SME.

S06 – Confirmation email

Send an email to treasury-team@nordhorn.example with subject 'FX reference rates <date> published' and the five rates in the body.

5. Business Rules

ID	Rule	Step
BR-01	Rates are stored with 4 decimal places; JPY is quoted per 100 units.	S02
BR-02	A day-on-day deviation > 5% for any currency must be reported to Treasury.	S03
BR-03	Only one row per date may exist in sheet Rates.	S04

6. Exception Handling

ID	Exception	Handling
BE-01	Rates for today not yet published	TBD
SE-01	Website not reachable	Retry; then inform Treasury

7. Operational Requirements

Schedule	Business days at 09:05 (Europe/Zurich)
Robot environment	Linux serverless robots (Automation Cloud)
Credentials	Treasury system credential to be stored in Orchestrator
SLA	Rates published by 09:30

8. Open Points

#	Open point	Owner	Status
1	Treasury system URL, screen layout and credential asset name	IT Treasury	Open
2	Behaviour on Swiss public holidays and when rates are published late	Treasury	Open
3	Does a > 5% deviation stop the run or only notify?	Process Owner	Open

Appendix A – Currencies

Code	Name	Quotation
EUR	Euro	CHF per 1 EUR
USD	US Dollar	CHF per 1 USD
GBP	Pound Sterling	CHF per 1 GBP
JPY	Japanese Yen	CHF per 100 JPY
CNY	Chinese Yuan Renminbi	CHF per 1 CNY
